

LeapTalent Level 3 End-point Assessment

International Sales

Scenario Demonstration — Pack Introduction

Difficulty: 4 of 5 — Advanced

What this pack is

This is a practice Scenario Demonstration pack modelled on the City & Guilds 9665 Data Technician end-point assessment. It contains four parts: this introduction, the Scenario Demonstration brief, the data files, and a Learner Guide showing how the task can be approached and the results you should expect to reach.

What is being looked at

This scenario combines three regional sales files with a messy exchange-rate table and asks for a currency conversion before any analysis. The areas examined are:

Area examined	Where it appears
Importing data from multiple formats (CSV, XLSX, document table)	Scenario 1, Task 1
Validating data — typos, formats, missing values	Scenario 1, Task 2
Appending several files and adding an identifier column	Scenario 1, Task 3 (Rep)
Reshaping a transposed rate table (unpivot) and filtering to one month	Scenario 1, Task 4
Joining on a key (Currency) to bring in matching rates	Scenario 1, Task 4
Deriving values with formulas (currency conversion, revenue)	Scenario 2, Tasks 1–2
Aggregating and ranking (best rep, top product, averages)	Scenario 2, Task 3
Visualising and summarising performance	Scenario 2, Task 3

Why this is rated 4 stars

The tasks are clearly specified, but the exchange-rate file lifts the difficulty: it is a messy table with title rows and a transposed layout (months down, currencies across) that must be **unpivoted** and then filtered to December 2018 before it can be joined. Getting the conversion direction right (divide by the rate, matched by currency) is also easy to get wrong. It stops short of 5 stars because the analysis itself is straightforward aggregation rather than open-ended.

Areas to watch

- The exchange-rate file is **transposed** with title rows — unpivot it, don't just transpose it (see the Learner Guide for the difference).
- Select only the **December 2018** rates before joining — other months are present too.
- Two extra currencies (**BRL, MAD**) appear in the rates but no representative uses them — they're distractors.
- Conversion direction: **Unit Price EUR = local price ÷ rate**. EUR's rate is 1.
- Add a **Representative** column when combining the three files, or you can't compare them.

What's in the pack

- **Scenario Demonstration – International Sales** (PDF) — the brief, in C&G format.
- **Jake.csv** — France sales (EUR).
- **Liam.xlsx** — UK sales (GBP).
- **Nick.csv** — China sales (CNY).
- **Exchange Rates.xlsx** — currency rates by month (transposed).
- **Annex A – December 2018 Exchange Rates** — clean rate table, embedded in the brief.
- **Learner Guide – International Sales** (PDF) — method and expected results.
