

Loan Request Data

Scenario Demonstration — Pack Introduction

Difficulty: 2 of 5 — Foundation+

What this pack is

This is a practice Scenario Demonstration pack modelled on the City & Guilds 9665 Data Technician end-point assessment. It contains four parts: this introduction, the Scenario Demonstration brief, the data files, and a Learner Guide showing how the task can be approached and the results you should expect to reach.

What is being looked at

This scenario exercises the core data-handling knowledge, skills and behaviours assessed in the Data Technician standard. The areas examined are:

Area examined	Where it appears
Importing & merging data from multiple sources (CSV, XLSX, document table)	Scenario 1 — aggregation
Matching records on common fields (keys)	Scenario 1 — Loan_ID / Property_Area
Identifying and removing corrupt / incomplete data	Scenario 1 — blank records
Formatting & presenting data for analysis	Scenario 1 — currency, table format
Creating derived values with formulas	Scenario 2 — Monthly Payment
Aggregate / conditional functions	Scenario 2 — applicant counts
Data visualisation	Scenario 2 — married applicants chart
Interpreting and reporting findings for an audience	Scenario 2 — findings for senior management

Why this is rated 2 stars

The brief is structured and instruction-led, which keeps the difficulty moderate — the learner is told what to produce at each step. It rises above a 1-star task because it requires a multi-

source merge across three file formats, record cleaning, a derived formula column, conditional counts and a chart, rather than simple formatting alone.

Areas to watch

- Keep the merge non-destructive — match on the key field, don't overwrite rows.
- The blank-record rule removes a substantial number of rows; expect the set to shrink noticeably.
- Monthly Payment is $\text{Loan Amount} \div \text{Loan Amount Term}$ — a simple division, not an interest calculation.
- The final chart covers **married** applicants only, split by gender — read the instruction carefully.

What's in the pack

- **Scenario Demonstration – Loan Request Data** (PDF) — the brief, in C&G format.
- **Loan Data.csv** — primary dataset (loan requests).
- **Personal Data.xlsx** — secondary dataset (applicant details).
- **Annex A – Branch Reference** — third source, embedded in the brief, to be imported.
- **Learner Guide – Loan Request Data** (PDF) — method and expected results.
